

Embedded Software Developer and Tester (Brussels, CDI/ODC)

Our client is a large international supplier of electronic banking components, cash terminals and services. On industrial level, they design, develop, assemble, install and maintain hundreds of thousands of payment terminals both in Belgium and internationally. For its Engineering Department in Brussels, he is presently seeking an **expert in Embedded Software Development and Testing** who will participate to the development and maintenance of embedded OS, drivers, interface layers libraries, telecom wireless and security technologies of payment terminals.

The position is based East of Brussels and implies moderate travel.
An attractive compensation package is proposed with a classic "Onbepaalde Duur Contract / Contrat à durée indéterminée".
Career opportunities within the Group are real.

Job description:

- You formalize functional and technical specifications, as well as ensure detailed analysis of solutions and proof of concepts.
- You participate to the development and programming
- You participate to the definition of integration test scenarios and proceed to unit testing of your own developments
- You formalize technical documentation and training material destined to internal and client's programmers
- You support and manage subcontracted and offshore developments (mainly to Germany, France and India).

Profile & Competences:

- Bachelor or Master degree in Electronics or Electro-Mechanics
- Min. 3 years experience in embedded software development and testing.
- Deep knowledge of C + notions in Python and/or Java, familiar with Linux environment.
- Familiar working on technical files
- Experience in process improvement related to development, testing, ergonomic and environment aspects of technology.
- Capability to communicate and give trainings in English, French or Dutch mother tongue
